

AcuCheck3™

Hand-Held Precision Photometer
By Pentair Water Pool and Spa®

Simple and precise pool and spa water testing

With AcuCheck3™ you can quickly and confidently test your pool's chemical balance right at poolside. Hand-held and easy to use, AcuCheck3 is available in four models, with one right for your testing needs. Each determines pH and sanitizer (chlorine or bromine) levels with pinpoint accuracy. Plus, depending on the model you choose, it also tests for alkalinity, secondary sanitizer, or cyanuric acid level. No more guesswork with test strips. And no more unwanted trips to the pool store.

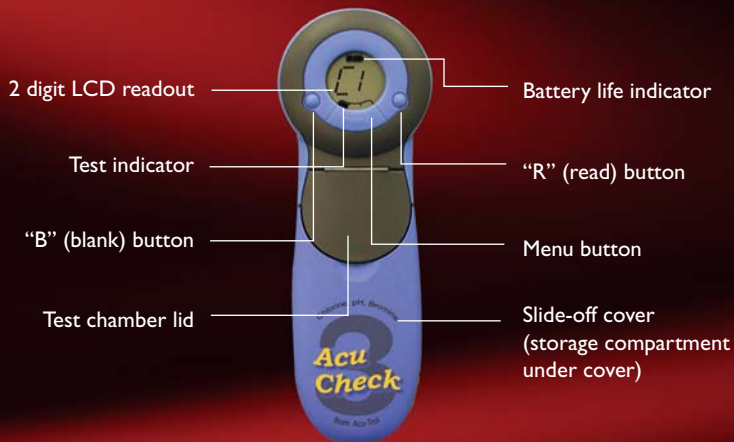

Now you'll instantly have the information you need to properly manage pH levels and sanitizer and keep your pool water in balance to prevent eye irritation, cloudy or acidic water, stained pool walls, odor, corroded equipment and bacteria.

- Precise and easy hand-held photospectrometer testing
- Choose the model that fits your specific needs and chemical treatment strategy
- Quick and easy – simply fill and insert a test tube, press a button, and you have your reading
- Digital readout is extremely accurate
- Everything you need for water testing is stored in a convenient compartment inside the AcuCheck3

AcuCheck3™

Hand-Held Precision Photometer

Everything you need is contained in one convenient package

- Hand-Held Photometer
- Test Tubes with Lids (2)
- Tablets (90)
- Crushing Stick
- Tablet Container

Measuring water quality has never been easier

Nothing is more inviting or enjoyable than sparkling clean and clear pool water. Now it's dramatically simpler to keep it that way. AcuCheck3 uses DPD chemistry, the most widely used and effective way to measure chlorine and PH in water; and is accurate to 0.1 ppm. No more test strips, no more guesswork. And best of all, a healthy and more comfortable swim.

4 easy steps to measure and adjust your chemical levels:

1. Calibrate the AcuCheck3 with a test tube filled with pool water.
2. Add a tablet to a second water sample and crush or stir until dissolved.
3. Insert the sample in the AcuCheck3 and press "R" for a reading.
4. The digital reading will display chemical levels. Add chemicals as needed to adjust to desired levels.

Choose the model that matches your chemical management system

- Model 745000110 – Chlorine, pH, Alkalinity
- Model 745000120 – Chlorine, pH, Cyanuric Acid
- Model 745000130 – Chlorine, Bromine, pH
- Model 745000140 – Bromine, pH, Alkalinity
